

Area between 0 and z

For Dr. Avanti Sethi's Classes

This is the Normal Distribution table that we will be using throughout the semester.

If the mean = 60 and the standard deviation = 6, then what is the area between 54 and 64?

Answer: We find the area between 60 and 54 and between 60 and 64 and add them up.

Area between 60 and 54: We are $(60-54)/6 = 1$ std dev away from the mean.
That is, the Z-score is 1.0. From the table above, we get an area of 0.3413.

Area between 60 and 64: We are $(64-60)/6 = .67$ sigmas from the mean (Z-score = .67).
This gives us an area of 0.2486.

So, the probability of X between 54 and 64 is the area under the curve from 54 to 64 which is equal to $.3413 + .2486 = .5899 = 58.99\%$.
